

Hello Glow Worms!

This week we are revising our counting skills up to 5!

You need small toys or objects of different colours and plates, cups or cans of the same colour as the toys or object.

- First, you can separate the objects into different colours,
- Then, you can stick numbers up to 5 on the cups and ask your kids to put the number of the toys into the same colour of the plate/cup/can.
- As they put each toy in each plate/cup/can count with them to say how many items of each colour are there.
